Information

Catalog overview, fax order form	18
----------------------------------------	----

Introduction

Operation:

Operation of the BFS flow switch is based on the movement of a spring-loaded piston within a cylindrical tube.

Function

A permanent magnet within the piston activates an adjustable reed switch, which is mounted on the outside of the body for easy setting.

As these flow switches are spring loaded they can be mounted in virtually any position without affecting the setpoint.

For the versions with glass tube, the top edge of the piston serves to indicate the flowrate on the measuring scale.

Areas of applications:

Control of flowcircuit e.g. for

- central lubrication circuits
- recirculating oil lubrication
- transformer oil systems, etc.

Measuring and monitoring of fluid and gaseous media e. g. in

- cooling circuits in welding machines
- induction heating plants
- high frequency generators
- condensers, transformers, compressors
- flow heaters, steam generators, centrifuges
- motor cooling systems, mixing plants
- hydraulic systems etc.

Technical Information

Switching range and switch point adjustment:

The switch ranges refer to the limits within which the switch point may infinitely be adjusted. The actual flow throughput can, depending on the flow velocity, be much larger.

The arrow marking the switch-off-point is positioned in line with the required flow rate, marked on the scale attached to the body.

08 / 05 FLS-US 01/2

Switch hysteresis:

Hysteresis is the difference in flow between the switch closing and opening again. By means of the careful choice of reed switches with particularly close differential, a typical hysteresis of 0.5 ...1.5 mm can be achieved with the BFS-series.

Viscosity compensation:

Viscosity compensation is achieved by the combination of the spring and the calibrated orifice inside the piston which guarantees high accuracy over a viscosity range of 1 to 600 cSt.

Special features:

- installation in any position
- high switch accuracy
- low switch hysteresis
- immediate response
- infinitely adjustable switch point
- high operating pressures
- robust design
- minimum load for change over (SPDT): 3 VA
- contact rate for change over (SPDT) with SPS-application:
200 V, 1 A, 20 VA (Please request)

Maintenance instructions:

Due to the design, the flow monitor does not require any maintenance. The use of media containing magnetic particles requires cleaning intervals. These cleaning intervals can be prolonged by using filters with a magnetic separator.

In case of vertical mounting with flow direction from top to bottom of the type BFS-10-N or BFS-10-0, the lowest switch points might fail to operate due to gravity causing a friction between bore and piston.

Barksdale Flow Switches Overview

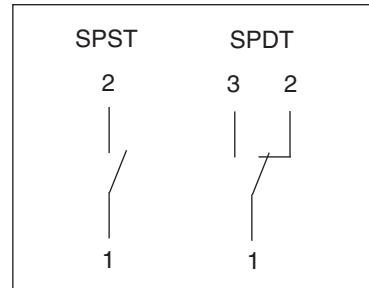

Specifications are subject to changes without notice.

Technical Information

Materials

Part	Brass	Stainless Steel
Housing	Nickel-pl. brass/ Alu	1.4571 / Alu
Float	Nickel-pl. brass	1.4571
Spring	1.4571	1.4571
Stop rings	Nickel-pl. brass	1.4571
Connections	Nickel-pl. brass	1.4571
Glass	Duran 50	
Seals	Perbunan, FKM or EPDM	
Electrical conn.	acc. to DIN 43650	
Accuracy f. s.	±10% for BFS-10, 20, 30, 40	

Wiring diagram

Installation instructions

- The instrument can be installed in any position in a system.
- Flow direction is from lowest to highest value, indicated on the scale.
- Flow media must be free of particle contamination, otherwise the instrument will not function properly. We recommend the use of dirt filters where necessary.
- The flow monitors must not be positioned in inductive fields. (Minimum distance to iron units: 10 mm)
- Electrical maximum switch loads of the reed switches must be carefully noted.

Flow Switches

Type BFS-10-N / BFS-10-O

for monitoring liquids,
with or without optical display

Features

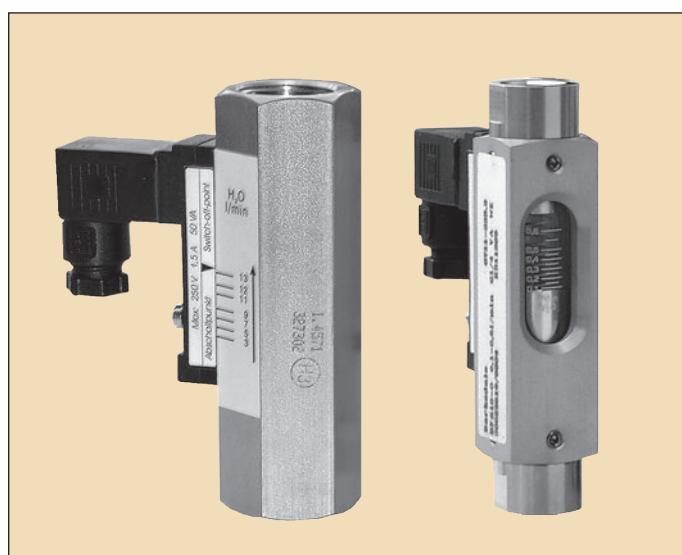

set point continuously adjustable
rugged, low hysteresis, any mounting position,
high accuracy and functional safety

Measuring ranges

0,005...0,06 l/min to 60...150 l/min for water

Applications

Measuring and monitoring of liquids,
e. g. in cooling systems, test beds, pumps etc.

Technical data BFS-10-N (without indication)

Flow Switches

Type BFS-20-O / BFS-20-OL

for liquids from 30 up to 600 cSt with optical display

Features

viscosity compensated from 30 to 600 cSt,
set point continuously adjustable,
rugged, low hysteresis, any mounting position,
high accuracy and functional safety,
with 1/2" connection also available as low cost version

Measuring ranges

0,1 ... 0,8 l/min to 30 ... 90 l/min for liquids up from
30 to 600 cSt.

Applications

Measuring and monitoring of liquids, e. g. in cooling or
hydraulic systems, test beds, pumps etc.

02 / 05 FLS US 01/1

Technical data BFS-20-O (with indication)

Measuring principle : variable area flow meter			
Materials	brass version	stainless steel vers.	
Flow meter	: brass, nickel-plated	1.4571	
Spring	: 1.4571	1.4571	
Fitting	: brass, nickel-plated	1.4571	
Display housing	: alumin., anodized	alumin., anodized	
Glass	: Duran 50	Duran 50	
Magnets	: ferrite	ferrite	
Operating pressure BFS-20-O	brass : PN 10 bar	VA 10 bar	press. drop 0,02...0,4 bar
Operating temperat.	: 120 °C (standard), 160 °C (option HT)		

Switch. ranges for:	Liquid. in l/min	Process connections

0712-262	BFS-20-OL-G1/2-MS-NO-ST	0712-344	BFS-20-OL-G1/2-MS-WE-ST
0712-263	BFS-20-O-G1-MS-NO-ST	0712-345	BFS-20-O-G1-MS-WE-ST
Stainless steel		Stainless steel	
0712-264	BFS-20-OL-G1/2-SS-NO-ST	0712-346	BFS-20-OL-G1/2-SS-WE-ST
0712-265	BFS-20-O-G1-SS-NO-ST	0712-347	BFS-20-O-G1-SS-WE-ST

The version BFS-20-O is also available with process connections, please see table on page P5.

To place an order please add the process connection to the order number.

Order number example: Order number + switching range = 0712-262, 1,0...4,0 l/min

Description

NO = normally open	O = with indication	MS = brass	Please specify switching range (see table on page P5)
WE = change-over	OL = with indication, low cost	SS = stainless steel	additional to order number.

Flow Switches

Type BFS-30-N / BFS-30-L / BFS-30-O

or liquids from 30 up to 600 cSt,
with or without optical display

Features

viscosity compensated from 30 up to 600 cSt,
set point continuously adjustable,
rugged, low hysteresis, any mounting position,
high accuracy and functional safety,
optional with pointer-indicating instrument

Measuring ranges

0.5...1.5 l/min to 35...110 l/min
for liquids from 30 up to 600 cSt.

Applications

Measuring and monitoring of liquids, e. g. in cooling
or hydraulic systems, test beds, pumps etc.

Technical data BFS-30-N (without indication)

Measuring principle : variable aera flow meter

Flow Switches

Type BFS-40-N / BFS-40-O

for water monitoring,
with or without optical display

Features

large switching range, set point continuously adjustable,
rugged, low hysteresis, any mounting position,
high accuracy and functional safety,
optional with pointer-indicating instrument

Measuring ranges

0,2...4,0 l/min to 35...250 l/min for water

Applications

Measuring and monitoring of liquids, e. g. in cooling
or hydraulic systems, test beds, pumps etc.
